ABSTRACT

This paper focuses on systematically compiling monographs based on their **Number (A-Z)**, **Assay Standards**, **Drug categories (API/Formulation)**, and **Therapeutic Uses**. The initiative aims to create a reliable, well-organized, and easily accessible digital repository that enhances knowledge, promotes clarity, and supports academic and Professional advancement. By preserving and presenting this critical scientific information, the project contributes to continuous learning, research innovation, and the maintenance of high standards in Pharmaceutical quality control.

KEYWORDS: Pharmacopoeia, Assay Methods, Category, Nature of Drugs.

INTRODUCTION

Every government around the world is responsible for safeguarding the health of its citizens, and this responsibility is reflected in each country's constitution. In India, the health of the population is monitored by the Ministry of Health and Family Welfare, which consists of several departments. Among these, the Drug Control Department plays a major role in ensuring that drugs used for treating diseases are safe and effective. Historically, the Ayurvedic system of medicine dominated healthcare in India. To meet the growing demand for medicinal plants, cultivation practices gradually developed. Later, the allopathic system of medicine entered India and became widely adopted due to its faster therapeutic action. Initially, drugs were imported, but issues related to poor quality frequently arose. As a result, the **Drugs and Cosmetics Act, 1940, and Rules, 1945**, were enacted. The primary objective of this

Act is to ensure that drug products entering the Indian market are **safe, efficacious, reliable, and of assured quality**. To achieve this, the Act provided for the establishment of important bodies such as the **Drug Technical Advisory Board (DTAB)** and the **Drug Consultative Committee (DCC)**. In addition, **Central Drug Laboratories (CDLs)** were established to examine and test the quality of drug products. Various authorities including Drug Inspectors, Government Analysts, and Directors of CDLs were appointed, with their qualifications, powers, and responsibilities clearly defined. In India, the **Indian Pharmacopoeia (IP)** has undergone multiple revisions:

- **1st Edition –1955 (1 Volume)**
- **2nd Edition –1966 (1 Volume)**
- **3rd Edition –1985 (2 Volumes)**
- **4th Edition – 1996 (2 Volumes)**
- **5th Edition – 2007 (3 Volumes)**
- **6th Edition – 2010 (4 Volumes)**
- **7th Edition – 2014 (4 Volumes)**
- **8th Edition – 2018 (4 Volumes)**
- **9th Edition – 2022 (4 Volumes)**

DISCUSSION

The alphabetical distribution (Table-1 and Fig-1) of the 2326 monographs in IP 2022 (Volumes II and III) demonstrates representation across letters. The alphabet C shows the highest contribution, accounting for 11.57% of all monographs, whereas Y contributes the least at 0.21%, with no monographs recorded under J and X. The analysis provides useful insight into how monographs are organized and highlights areas where future updates of the Indian Pharmacopoeia may consider expanding coverage. The overall alphabetical order of monograph contribution is as follows:

C > P > D > A > M > T > S > B > E > F > L > N > I > R > O > H > G > V > Z > Q > K > W > U > X.

The analytical method-wise compilation (Table-2 and Fig-2) of 2326 monographs (A–Z) in IP 2022 reveals the use of 27 different analytical techniques, with a distinct predominance of chromatographic methods. HPLC is the most widely employed technique, accounting for 1256 monographs (51.51%), highlighting its central role in modern pharmaceutical analysis. Following HPLC, potentiometric methods (15.06%) and UV spectrophotometric methods (9.26%) constitute the next major contributors. The data also indicate that titrimetry remains an important analytical approach, continuing to play a significant role in drug analysis after HPLC. This distribution underscores the evolving analytical landscape of the pharmacopoeia, with a strong emphasis on precision, sensitivity, and reliability.

The compilation and percentage-wise analysis of monographs in IP 2022 based on pharmaceutical category (Table-4 and Fig-4 & 5) reveal two major classifications: Pharmaceutical Substances (APIs) and Pharmaceutical Formulations. Among the 2326 monographs reviewed, 1086 relate to drug substances, while 1238 pertain to drug products. The drug product category includes 26 different types of pharmaceutical formulations, reflecting the diversity of dosage forms standardized in the pharmacopoeia.

Among these formulations, tablets represent the highest contribution (Table-3 and Fig-3) with 560 monographs (40.82%), followed by injections (19.53%) and capsules (7.58%). The least represented dosage forms—each contributing approximately 1%—include emulsions, pastes, tinctures, and mouthwashes. The analysis highlights the predominance of solid oral dosage forms, particularly tablets, in the Indian Pharmacopoeia, while also indicating relatively limited representation of liquid and semi-solid formulations. This distribution reflects current pharmaceutical trends and therapeutic preferences within the healthcare system.

Analysis of monographs according to their therapeutic uses reveals that over 10% are categorized under hypoglycemic agents, anti-tubercular drugs, and sedatives. Additionally, approximately 12% of the monographs are associated with steroidal hormone therapy.

CONCLUSION

The present compilation provides a structured overview of the Indian Pharmacopoeia (IP) 2022, highlighting the breadth and diversity of its 3,042 monographs. Of these, 2,326 monographs fall within the alphabetical section (A–Z), representing a comprehensive range of pharmaceutical substances. The inclusion of varied categories—such as Vitamins, Minerals, Amino Acids, and Fatty Acids; Phytopharmaceuticals; Herbal Drugs and Extracts; Vaccines and Immunoserum; Blood and Blood-derived Products; Biotechnological Products; Radiopharmaceutical Preparations; and Veterinary-related monographs—underscores the multidisciplinary scope of IP 2022.

The digitalization of library resources by the Government of India highlights a growing need for well-organized and accessible Pharmacopoeial archives. Despite the availability of physical volumes, earlier editions of the Pharmacopoeia remain scattered and inadequately compiled, limiting their potential value to researchers and professionals.

This review provides a distinctive and systematic compilation of the Indian Pharmacopoeia 2022, focusing on the number of monographs, assay methods, pharmaceutical categories, and therapeutic uses. By organizing and presenting this information in a clear and consolidated manner, the work contributes to improved accessibility, supports academic and regulatory reference needs, and reinforces the importance of preserving Pharmacopoeial knowledge in digital form. Ultimately, this compilation serves as a meaningful step toward bridging archival gaps and strengthening the foundation for future research and policy development in the field of pharmaceuticals.
